- CAMALYTIC ACTIVITY: D-glyceraldehyde 3-phosphate + pho-
- NAD(P)(+) = 3-phospho-D-glyceroyl phosphate + NAD(P)H.

- PATHWAY: Second phase of glycolysis; first step.
- SUBURIT: Homotetramer (By similarity).
- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
- SINCLARITY: BELONGS TO THE GLYCERALDEHYDE 3-PHOSPHATE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SUBUNIT: Homotetramer (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    FUNCTION: Hydrolyzes a wide variety of 6-phospho-alpha-D-glucosides including maltose-6/P, trehalose-6P and the 6'-phosphorylated derivatives of the five linkage-isomeric alpha-D-glucosyl-D-fructoses: trehalulose-6'P, turanose-6'P, maltulose-6'P, leucrose-6'P, and palatinose-6'P. However, sucrose-6P is not a substrate for malH, and this enzyme also fails to hydrolyze beta-O-linked phosphorylated disaccharides such as cellobiose-6'P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               metabolism.
